

INTERMEDIATE ARCHITECT / ARCHITECTURAL PRODUCT SPECIALIST

Job Description

We are seeking an Intermediate Architect to join Accurate Lock & Hardware as an Architectural Product Specialist, helping translate architectural design intent into exceptional hardware solutions.

This role is ideal for an architect looking to move beyond traditional practice while remaining closely connected to the architectural process. Working at the intersection of design, technical documentation, and product development, this position collaborates with architects, designers, and internal teams to ensure our hardware solutions are thoughtfully integrated into projects from early concept through installation.

As a luxury hardware manufacturer working with leading architects and designers, we view our products as an extension of architecture itself — where precision, materiality, and detail matter.

WHAT YOU'LL DO

- Partner with architects and designers to develop and specify door and cabinet hardware solutions that align with the design vision of each project.
- Provide technical guidance and product expertise to support the specification process from early design through construction documentation and installation.
- Develop and maintain product resources including technical documentation, cut sheets, and Revit families/models used by architects and design teams.
- Review architectural drawings, details, and hardware schedules to ensure appropriate product application and coordination.
- Collaborate with internal engineering, production, and sales teams to translate architectural requirements into manufacturable hardware solutions.
- Serve as a technical resource on architectural door hardware standards, detailing, and best practices.
- Help improve the digital tools and documentation architects rely on to integrate our products into their projects.

WHAT WE'RE LOOKING FOR

- Degree in Architecture, Architectural Technology, Construction Management, or a related discipline.
- 3–8 years of professional experience preferred in an architecture firm, construction environment, or building products industry preferred.
- Strong understanding of architectural documentation, detailing, and the construction process.
- Familiarity with Revit, including working with models and families.
- Ability to read and interpret architectural drawings, details, and hardware schedules.
- A passion for craft, materials, and well-executed architectural details.
- Strong communication skills and the ability to collaborate with both design and technical teams.
- Self-starter mindset with the ability to manage multiple projects and priorities.

WHY ACCURATE

Accurate Lock & Hardware is a legacy manufacturer with a spirit of innovation. Our team works in a collaborative, fast-paced environment where ideas move quickly from concept to production.

Team members at Accurate:

- Work directly with leading architects and designers on high-profile projects.
- Help bring bespoke hardware solutions to life that cannot be found anywhere else.
- Contribute to a company known for craftsmanship, technical excellence, and lifetime product support.
- Are empowered as self-starters who take ownership of their work and ideas.
- Play a role in shaping the details of some of the most important doors in the world.

If you are an architect who enjoys the technical side of design and wants to stay connected to the architectural community while exploring a new professional path, we would love to hear from you.
